Cognizant Experience

Verizon-Verizon VCG CXO UAT-Di Quality Engineer- 10 Months (Sep 2025 - Jul 2026)

Project Description

Detail-oriented UAT Tester with hands-on experience in telecom domain projects, specifically within the Verizon ecosystem. Skilled in conducting lower canary and production validations across ACSS and POS channels to ensure seamless customer experience and system stability. Proficient in using tools like qTest for test management, Postman for API validation, and Jira for defect tracking and agile collaboration. Adept at identifying critical issues, validating business workflows, and ensuring compliance with functional requirements in high-stakes production environments.

Roles & Responsibilities

As a UAT Tester in the Verizon project, I was responsible for executing comprehensive user acceptance testing across telecom order management and billing systems. I conducted lower canary and production validations using ACSS and POS channels to ensure system stability and readiness prior to full-scale deployment. My role involved validating end-to-end customer journeys, including order creation, provisioning, and billing workflows. I utilized qTest for test case management and execution, Postman for API testing and backend validation, and Jira for defect tracking and agile collaboration. I actively participated in daily stand-ups, Refinement call , BRB and defect tracking meetings, and worked closely with cross-functional teams including QA, development, and business stakeholders to ensure alignment on release goals. I also prepared test summary reports and provided sign-off documentation for production releases, ensuring that all business and functional requirements were met with high quality and precision.

Career Highlights

Got cheers points for working in critical project.
