Work Experience

Cognizant Experience

Verizon-Verizon VCG CXO UAT-Di Quality Engineer- 1 Year & 6 Months (Aug 2024 - Feb 2026)

Project Description

The Digital Support Content & Media project focused on enhancing customer self-service experiences through AI-driven personalization and unified digital support platforms. The goal was to reduce customer care calls and improve satisfaction by delivering simple, consistent, and personalized support journeys across mobile and home channels. The project involved redesigning support overview pages, improving SEO, enhancing FAQs, and introducing AI-powered features such as content summaries, on-page search answers, and voice search. Authenticated user experiences were implemented for device-specific support, order management, returns, exchanges, trade-ins, and upgrades. Personalization was applied across banners, FAQs, and content using intent-based targeting. As a result, the platform reduced support calls by approximately 288K, delivered $3.1M in cost savings, increased positive customer ratings beyond 60%, and successfully unified mobile and home support experiences.

Roles & Responsibilities

As a UAT Tester on Verizon's support and service platforms, I was responsible for ensuring the accuracy and usability of customer-facing features through comprehensive manual testing across lower, canary, and production environments. I designed and executed test cases in qTest, prepared detailed test evidence, and validated a wide range of functionalities including support overview, contact us, and service central pages, as well as banner feedback, redesigned layouts, glossary links, FAQs, personalized widgets, video templates, and knowledge base bookmarking.

Career Highlights

Received the Sapphire Award from Manager for Exceptional dedication impacting key projects
